PERSONAL PROJECTS

Instagram Clone

- Instagram clone is a cross platform application, built using Ionic Framework. It is a clone of Instagram login page and all we need to do is use of social engineering in the best way and make user login on our device.

MapTracker

- MapTracker is a cross platform application, built using Ionic Framework. In mapTracker user can be tracked using his geolocation. Latitude and Longitude will be tracked and they will be stored along with respected uid in Firebase.

Arnoldapp

- Arnold's app is a cross platform application, built using Ionic Framework. By this application, admin can access users' gmail account and password because password and gmail will be stored in Firebase Realtime database.
